

Mix'n'Shake™

Stop Stirring,
Get Spraying.
Let's Shake.

Mix'n'Shake™

Automated Stirring Technology

Your formula is in the cup, mixing stick at the ready – it's time to stir.

...and stir.

...and stir again.

Manual stirring can make achieving a uniform paint color a real challenge. Even the most thorough – and vigorous – painters can find that an intensive stirring session ends with aching muscles and a cup of partially mixed paint.

When painters are working on multiple vehicles every day, minutes spent stirring are quick to add up. Isn't it time to shake up the process?

Did you know?

On average, a body shop performing six repairs per day will waste 15 working days (cumulated time per year) due to manual stirring activities.

Let's shake...

Patchy color, uneven surfaces, reduced adhesion... a poor paint mix can cause a host of problems for both body shops and painters.

The answer? PPG Mix'n'Shake – an innovative new system that replaces the manual stirring process to ensure a uniform paint mix and complete color accuracy every time.

Using the **Mix'n'Shake** system can help boost the productivity of your body shops by saving time on reworks, improve profitability and sustainability by reducing wasted paint and consumables, and achieve a cleaner, more efficient painter experience.

Organized Chaos

At PPG, we know that a flawless finish relies on a perfect paint mix. That's why our technical experts have put years of research and development into creating the **Mix'n'Shake** system: an advanced stirring device and unique, specially designed cups. Simply place the cup into the device, close the lid and select one of the three programs for primer,

basecoat or clearcoat. The combination of speed, movement and the cup's three functional indentations allow every drop of paint to be blended into a fully uniform mix. **Mix'n'Shake's** exclusive stirring mechanism is scientifically proven to deliver consistent results every time.

Easy to use with just three program buttons and compatible with virtually any paint system

Compact for easy maneuvering throughout the body shop
(Optional bracket system available for wall mounting)

Cups connect to the spray gun using Mix'n'Shake adapter line for ultimate security

One lid fits all cup sizes
(two filter sizes available)

Exclusive stirring mechanism, scientifically proven to give a perfect mix

Unique indented paint cup design

Three cup sizes available: 400ml, 650ml, 850ml
(Available with or without printed ratios)

Cleaner work environment
100% focus on people

Our self-contained **Mix'n'Shake** system completely replaces manual paint stirring. This means fewer spills and splashes for a cleaner workspace and reduces the risk of employee exertion or painful injury from the stirring process – helping to attract and retain the best people for the business.

Increased Efficiency
Gain up to 6% productive hours

Painters can achieve a perfect mix quickly and easily with our automated stirring system, freeing up valuable time which can be allocated to other important tasks. Even better, the **Mix'n'Shake** device connects with the PPG LINQ™ digital ecosystem for even more benefits.

Improved productivity
100% accuracy

Poorly stirred paint gives less-than-perfect results. **Mix'n'Shake** is a fully automatic system that eliminates the risk of human error, saves time on reworks and gives technicians the confidence of 100% consistency and color accuracy every time.

Greater profitability
Up to 10% savings on consumables

Our **Mix'n'Shake** system helps body shops save money on stirring sticks, sundries, and prevent product waste, supporting more sustainable practices. Time previously used stirring can now be used on activities that deliver further value to your business, while reducing environmental impact and promoting a more efficient use of resources.
